I am working on a Windows platform, if that makes any difference. The function runs fine, but when I open the output file, it contains no output.

Dynamic blocks: For the first time, choose how to display blocks for the rest of your drawing. Now they're linked to the Block Manager rather than having to be stored in a block palette. When you select a block, it appears in a block palette, and when you release it, it appears in the Block Manager. "In" and "Out" grids: For the first time, you can define grid lines with different symbols, fonts, and colors for both "In" and "Out" views. Customize grids for the five views (Minimize, Frame, Block Manager, Snap, and History). Lock, Lock, Revise: With the Lock and Lock buttons, you can lock your current drawing, but leave the existing changes in place, then revise it later. And much more... For more information on all the new features in AutoCAD, check out the AutoCAD 2023 Overview (video: 1:22 min.). This is just a small sampling of the new features. We plan to release more

System Requirements:

The only recommended display for this game is a 120Hz or 144Hz refresh rate. The recommended display resolution is 4K @ 144hz, but 1680x1050 @ 60hz will be fine as well. The CPU can be anything but I recommend a capable CPU. If you have a Ryzen, the 1080p settings are able to be run but only at 30 fps in the most challenging scenes. Since this is a re-release and not a full remake, there aren't many improvements in the engine or game
