Download and install ComponentOne Spreadsheet Viewer for Windows XP ComponentOne Spreadsheet Viewer is a lightweight software application built specifically for Windows XP users in order to help them open and view XLS and XLSX documents. Simplistic looks You are welcomed by a clean feature lineup that allows you to carry out most operations with minimal effort. The tool embeds only a few options, so less experienced users can learn to configure the entire process with just a few clicks. Main features ComponentOne Spreadsheet Viewer gives you the possibility to open multiple documents at the same time and quickly switch between them. Plus, you are allowed to sort the items included in the documents in an ascending or descending order, and filter data. What's more, you can make use of basic editing operations, so you can copy the selected information to the clipboard for pasting it into other third-party utilities, and edit data within the XLS and XLSX documents without affecting the output file. You can type in text messages directly into the primary panel, delete characters, and paste the selected information into another column or row. Last but not least, it is important to mention that it offers support for touch-enabled devices and allows you to undo or redo the changes applied to the files. On the downside, you cannot export data to a file, so you are stuck with the viewing and editing options. It doesn't require much computer knowledge to work with this tool, as it comes bundled with basic functions for helping you open and check out the contents stored within XLS and XLSX documents. Tests revealed that ComponentOne Spreadsheet Viewer carries out a task quickly and provides very good output results. It is quite friendly with system resources, so the overall performance

Development of the marine teleost *Platichthys flesus*:
Histological changes during embryo and larval development. The marine teleost *platichthys flesus*, a common commercial fish used for both commercial and scientific purposes, is a major species of importance in developmental biology. By using histology, electron microscopy, immunohistochemistry, laser confocal microscopy, and reverse transcription-polymerase chain reaction, we describe the onset of the larval stage of this fish, from fertilization to hatching. The number of micromeres and nuclei in each micromere is constant during the time that the embryo and larva are developing. Differentiation of individual tissues, including the formation of a tegument, the development of notochord, mesenchyme, and the neural tube, begins with the onset of gastrulation. Interestingly, most of the internal organs are formed by the end of gastrulation. The yolk granules are not fragmented until later
