RealChat Software Crack + Product Key PC/Windows [Updated-2022]

Live, Real and Customized Chat Live, Real and Customized Chat - Instant messaging based on Web 2.0 technology- means you can set up a chat room - and have your customers drop in - literally - to talk with you, your customers and your staff, live - on your Web site. You can chat live with your customers - to: · Solve their problems · Provide them with confidential information · Hold a customized chat or moderated chat with them · Conduct moderated or celebrity chat rooms for your staff or to improve their skills You can chat live with your staff - to: · Do realtime consulting · Get used to it before you hire an employee · Make them look attractive · Get the best talent · Promote your company Chat rooms on your Web site can be public or private. In addition, you can set the chat room in server mode (one way) or client mode (two ways), which allow your chat room to function in a way that suits you. Personalized Chat Room Support As you set up your chat rooms, you can add live support to each chat. It will be just like the live person support that you provide for your phone: · You need not to make a call or send an email to get support for your chat · When a live customer comes online, you can immediately address his or her need · Every time you make a modification to a chat room, you can immediately test the result · Every time you make a modification to a chat room, you can immediately see whether a live customer has been affected Customizable Chat room support. As you set up your chat room, you can customize the appearance to meet your needs. You can: · Choose what type of chat room you need: simple, moderator, celebrity, time based chat, chat room with chat records, chat room with chat history · Choose what users can do in the chat room: start, join, leave, mute, warn, send a picture, smile, cry, add a

comment to a user, contact a user, start a chat, log off, observe, hear a description of the room, see a summary of the room, join in a room, chat · Choose which users can send a message to the room · Choose the room theme · Choose the text color for all texts · Choose the menu text color for all texts · Choose the background of the room · Choose the emoticons

RealChat Software PC/Windows [2022-Latest]

· The server side of the package installs on a server. You can run it on your own dedicated server or a shared server. · Installation requires the installation of a JDK 1.1 or higher. · The software is a Java technology solution with a client and server part. · It is a multi-user chat that works with a chat room and messages. You can create your own room or send your own messages that your visitors can read. · You can set up rooms with different features depending on your preferences. For instance, you can have an informational room and a room for supporting a website. · You can set up a message of the day or a message of the week. If you select the latter option, you can set up your message of the day/week yourself. If you do not know how to do this, you can ask for instructions from our website support. · You can send a direct message to any user in the room. · You can configure the default output colors for all users and set up non-default output colors for individual users. This includes the chat colors of all user pages. · In realtime, the system can send up to 400 messages per second. The program can thus be used for online meetings, conferences or events. · The system is provided with a server-side file manager that holds the text of all messages in a textfile. All chat logs and other data can be saved in this file, including the images and sounds. · Under the configuration settings, you can set your chat room to be password protected, private, and moderated. Moderators can be added to the chat rooms. Moderators can ban or kick users from the chat rooms. · You can set the prefix for your rooms in order to avoid problems with other similar rooms. · It supports HTML-Elements with the Widget class in the client part. · It is fully compatible with all Java 1.1 and later environments. · Log files and other data can be archived. A file log

allows you to see which messages have been sent to the system and how often they were sent. There is also a console log, which displays the most recent messages in a line. · All message-logs can be saved in plain text format. The logs can be displayed as a list or a table. · It has a console that supports a console color picker that supports 16 predefined colors and offers a color picker dialog that supports

What's New in the?

· RealChat Client is a web-based text chat application. RealChat Server is a Java application for running on a web server on an unlimited number of users. · RealChat is highly efficient because the main program is written in Java, thus eliminating the need to install and run yet another application, such as RealChat Server. · The user interface is immediately intuitive and easy to use. In order to make the program work, you just need to upload it to your web server and provide your users with a valid JRE 1.1 installation, or a Java-enabled browser. · To ensure security, RealChat Server itself communicates only with the client using a secure socket connection and encrypts all data transmitted. · RealChat is fully customizable. You can freely change the user interface by modifying any JSP files to your specific requirements. · RealChat Server is compatible with any host operating system. Linux, UNIX, BSD, Solaris and other compatible systems are supported. As well as Microsoft Windows. · Any type of configuration may be done. You may create multiple rooms, regulate access or configure all the settings for each room to your specific requirements. · RealChat Server comes with a comprehensive documentation including user guides and instructions in several languages. You may view them via their own or RealChat`s official website. · RealChat Server is quite user friendly. It comes with simple

interfaces for creating rooms, adding users, editing messages and managing the rooms. · In case you don't want to use Java-based browsers, you may use a Java applet to access RealChat Server. · To make RealChat Server run on your website, all you need is a Java-enabled browser. · To make the client applet work, you may either use a JRE 1.1 browser or the client applet itself. · With one click, you may install our complete package on as many as 40 servers. Each package contains RealChat Server and RealChat Client, when you purchase more than one package, only the first package is free of charge. RealChat Client User Guide: · Step 1 : [Click here to download the free demo package of RealChat.](#) · Step 2 : Double-click on the RealChat.JAR file to decompress it. · Step 3 : Uncompress the downloaded file (just drag and drop it into your favorite web server). · Step 4 : Once the realchat-server.jar file is decomp
