TubeOhm ANTI TRANSPIRANT Download Link: Profile Blog What does "car-free day" mean in the US? Between October 20th and 22nd, 2018, the City of Santa Monica in California will be making a strong statement about sustainable transportation. They're calling the day "Car-Free Day" and they're encouraging everyone to leave their cars at home and go out for walks, bike rides and take public transit. Why is this important? California (and the US) has the highest per-capita car ownership in the country. In fact, some say that the US car-culture is responsible for its ever-worsening air pollution. Experts believe that half of the lead and diesel air pollution in the US comes from cars. Car-free days are one way that cities can take a stand and begin shifting towards a better transportation system. There are lots of health benefits to walking, biking and using public transit. Not to mention it's fun and it gets you moving! You'll find that many of the cities that are making this shift have raised their minimum wage so their

Slam Plus Synth is an evolving two-operator analog synthesis. Synth 1 is a mono oscillator that produces a variety of oscillating waveforms. You can use the oscillator itself as an audio source by taking its output and routing it to the "VU" input of a VU meter (or routing it to an input of a VU rack). Synth 2 has a dual stereo input and a single stereo output. It contains a LFO with configurable waveforms and modulations on the carrier, envelope and LFO. You can also use the LFO to modulate the output of a sound effect module or a VU meter. You can use the LFO in combination with the Phaser or LFO to produce interesting movement in the sound or to modulate a VU 77a5ca646e
