All customers, employees and suppliers are managed from the same system. JCL POS POS Features: - Fast, high-performance POS - System setting -

JCL POS

Key Macro is the first SQL Server OLTP database system based on the new, revolutionary "SQL server Always on" technology. Key Macro SQL Server always on technology uses "online" or "read only" databases, so that you never have to worry about database crashes or data loss. It's so reliable, you can always be sure your database is up to date, secure and sound. Key Macro SQL Server also employs distributed transactions, allowing you to run concurrent processes in many different SQL server instances, where the data is replicated and updated in parallel. If you need to take your database offline, you can take all database components offline, completely protected by Key Macro SQL Server. Key Macro SQL Server is the only SQL Server OLTP database system with a true ACID database, which guarantees data integrity, read and write consistency, and database recovery. Key Macro SQL Server allows you to create tables with millions of rows, plus a few billion rows on high-end servers. Furthermore, it comes with full support for SQL standard, SQL server 2000, SQL server 2005, SQL server 2008, SQL server 2008 R2, SQL server 2012, SQL server 2012 R2, SQL server 2014 and SQL server 2014 R2. Key Macro SQL Server is easy-to-use and can be installed, configured, used and repaired in minutes. Key Macro SQL Server is available with an enterprise agreement for unlimited usage, and is priced from £75 for the standard edition and £99 for the premium edition. There is also a free version available for beta testers, which comes with limited features. Customer Highlights: · Fully supports SQL Server 2008, SQL Server 2008 R2, SQL Server 2012, SQL Server 2012 R2, SQL Server

2014 and SQL server 2014 R2. · Can run on Windows Server 2008, Windows Server 2008 R2, Windows Server 2012, Windows Server 2012 R2, Windows Server 2012 R2 and Windows Server 2016. · Can run under SQL Server 2000, SQL Server 2005, SQL Server 2008 and SQL Server 2008 R2. · Comes with one-click installation and unattended installation and repair. · One click installation and unattended installation and repair. · Installation and repair with one-click wizard or unattended installation and repair. · Fully compatible with 32-bit and 64-bit Windows. · One of the most stable and robust products on the market. · Supports all editions of SQL Server. · Support proactive database monitoring and alerting. · Supports Microsoft's 77a5ca646e

JCL POS is a comprehensive point of sale (POS) application. It was designed to ease daily management tasks and improve business workflow. JCL POS is suitable for medium-sized stores, which allows you to manage sales, inventory, and customers in a hassle-free manner. JCL POS runs on all Windows platforms, including Windows 7/8/8.1/10, Windows Server 2008/2012 and 2016. Record Product and Sale Info for each Customer, Product and Payment. Store, Split, and Inventory. Payment, Discount, and Discount Types. Sales Reports and Invoicing. Customer Tracking. Payment by Cash, Debit, and Credit Cards. Automatic Login. Accounting and General Functions. Support for 10 Users, Shifts, POS Stations, Customer Groups, and Booking. JCL POS is a comprehensive POS application suitable for medium-sized stores, which aims to ease daily management tasks and improve business workflow. It bundles various modules for organizing products, generating invoices, managing transactions and inventory items, customers and suppliers, which makes it versatile enough to be used in restaurants, bars, home delivery businesses and regular retails shops. Modern-looking GUI, long configuration process Borrowing the appearance of the Windows 8 start screen, the interface displays all the functions as tiles, organized in different color-coded categories. This approach makes it suitable for touch screens. Unfortunately, tiles are not draggable, so you cannot tamper with the default layout. Before you can use it, JCL POS requires you to go through a rather tedious configuration process, since you must define stores and POS stations, user accounts, client types and titles, currency rates, payment modes, units of measure, discounts, and so on. Nevertheless, you only have to do this once, so that you won't get interrupted while trying to create a new invoice or enter a new sale. Inventory management, invoices, and payments Designed for daily usage, JCL POS features employee shift and cash register management options. It enables store managers and staff to keep track of sales, inventories, and clients, as well as generate invoices and receipts with ease. Products can be sorted in a smart way, and payments can be tracked with JCL POS. The database comprises information regarding the status of all your stores, making it easier to manage them. Furthermore, JCL POS features a dedicated hostelry module

JCL POS is a comprehensive Point-of-Sale software for restaurants, bars, delis, home delivery companies and regular retails shops. JCL POS is suitable for medium-sized stores. It bundles various modules for organizing products, generating invoices, managing transactions and inventory items, customers and suppliers, which makes it versatile enough to be used in restaurants, bars, home delivery businesses and regular retails shops. Long configuration processJCL POS configuration process is relatively long, it took me about 8 hours to complete the configuration process before I could start using JCL POS. Configuration Process For a normal configuration process, enter the software first then follow these steps: 1. Register for a free account; 2. Register for a free payment method; 3. Configure and create a brand and website; 4. Add payment methods; 5. Add vendors; 6. Add employees; 7. Add clients and products; 8. Create stores and POS stations; 9. Configure the software; 10. Configure payment methods. The software consists of many features like, POS Stations, product data, sales and purchases, bar, restaurant, bank, customer module, employee shift, etc. A couple of bugs and a very long configuration process Here are a couple of bugs that I have found after using the software. The soft keyboard doesn't always open when I add a product to the cart. When I create a new bill, the related transaction always say is not found in database. The software is not available in Russian. There are some companies that still don't support JCL POS POS software, some customer service reps and the people involved in the development of the software don't speak or understand Russian. My support staff

helped me to find a way to configure JCL POS POS software. My support staff said that this issue will be fixed soon. Therefore, I think the software developers should hire more Russian support staff. Small bugs in the software This software has some small bugs in it. 1. When I add a vendor in a store, the software fails to read some data. 2. The software is unable to read all data in the database. 3. I cannot mark a sale as over, so I cannot re-assign it to another employee or product. I think the developers should fix the software immediately to avoid such small bugs. A great POS software that you can trust I am a retail owner for over 20 years and I can tell you how important POS software is. When you sell products, you want to make a profit. Sometimes, vendors or product brands ask the salesperson to mark the sale as over. This creates a problem when the new receipt is given to the customer. If you have a POS system that can't do this, you will lose sales. I don
