Photoshop is a powerful image manipulation program that requires knowledge and practice. A basic understanding of design principles and color theory are useful, and knowledge of computer graphics principles is highly recommended. Knowing Your Limitations One of the keys to becoming a good Photoshop user is to know your limitations. Photoshop's primary interface is text-based. You can click, double-click, or drag (move) and rotate objects in the image. You can add text or layer masks to manipulate a portion of an image. You can cut and paste with images, which is quite useful. You can also paste into a layer and apply transparency, and you can create shadows and reflections. All of the editing and manipulation you perform in Photoshop starts in the layer-based interface. If you're not familiar with layers, I recommend that you learn about them. In this book, I take the time to explain the basic principles of layers and reveal how they're organized in the Photoshop interface. You can perform many other tasks in Photoshop, but the primary job of Photoshop is to manipulate an image and control what you place where in the image. Layers have an unlimited number of use, and the document window is the canvas where you add and manipulate elements and areas. The canvas can be as large as an entire monitor screen, which enables you to create an image that takes up the entire monitor. Thus, you can create a very large file. I discuss the layers palette, a video window (which enables you to view video elements as well as your image), and layers masks in this book. Using the Layers Palette When you open a document in Photoshop (File→Open or open a project file), the image appears in the workspace window (explained in the following list), similar to Figure 2-1. By default, when you open an image, you have several methods of editing or manipulating it. You can be productive in Photoshop using the toolbox on the left, or you can use the workspace window as a canvas where you add new layers and manipulate existing layers. You can use as many or as few tools as you like to work with your image, but you can't touch the layers that you don't see in the workspace. **Figure 2-1:** The standard workspace. The layers palette (refer to Figure 2-1) is the most common workspace in Photoshop. When you add a new layer, you see a number in the number pane,

Hodgers Hodggers, Inc. was a media and information technology company founded in 1971 that traded on the NASDAQ stock exchange. It was best known as the creator of the VIVA! kiosks. VIVA! kiosks were introduced in 1983, and gained significant popularity in the 1990s. The company was sold to Tyco Retail Group in February 1998. The company was headquartered in Sudbury, Massachusetts. History Founding The company was founded in 1971 as C.R. Hodggers, Inc. under the control of Dan Ullman, who would become its president. Hodggers was a provider of computer software, computer peripherals, and computer services. It expanded into the media industry in 1978. It became Hodggers, Inc. in 1982. In 1983, it began licensing the Viva! kiosk concept. Dan Ullman remained president and chief executive officer until his death on October 20, 2003. In 1979, Ullman acquired a chain of 14 movie theaters in Massachusetts. This was his first property as president of Hodggers. Ullman resigned from Hodggers on August 1, 1997, due to "a dispute over his refusal to sign a change of control agreement when Xerox wanted to acquire the company." At the time of Ullman's death, Hodggers had over 7,700 employees, and revenues had reached \$1 billion for the previous year. In the late 1980s, a number of consumer electronics companies were attempting to put the VIVA! kiosk concept into a single, expanded kiosk. But there was a significant barrier to a successful acquisition, because the company was public while the participating equipment manufacturers had no obligation to sell their products to resellers of VIVA! Kiosk equipment. In an attempt to shed this lack of market power, Hodggers acquired a portfolio of companies, including Precision Holdings, a maker of VIVA! kiosks, for \$250,000. This led to a reorganization of the group: the company would focus on the kiosk business and acquire electronics resellers to resell VIVA! software, and new parent company Tyco Retail Group would acquire Hodggers. Acquisitions and divestitures Tyco Retail Group in February 1998, Tyco Retail Group acquired Hodggers for \$360 million. The kiosk division was folded into the Tyco Retail Group subsidiary MarketMaster Solutions.
