Joint to Submit Documents on Improper Payment to FNRB on July 27 Posted: 07/27/2011 JOINT RELEASE CONTACT: (212) 549-2666 NEW YORK - The U.S. Commodity Futures Trading Commission (CFTC) today announced that on July 27, the Commission, the Office of the Chief Counsel for Regulation (OCCR), the Office of the Chief Enforcement Counsel (OCEC), the Commodity Futures Trading Commission National Futures & Derivatives Market Improvement Act of 2010 (FMIA 2010) Task Force, and staff from the Department of Justice will submit additional documents that are the subjects of ongoing administrative proceedings. The submissions concern the proposed rule for criteria for imposing penalties against an entity for an improper transfer of funds by an OTC derivatives clearing organization (DCO). The scheduled submission of documents continues an ongoing outreach effort to educate market participants and the public about the proposed rule, to ensure that the proposal is consistent with the law, and to provide interested parties with additional information and opportunities to comment on the proposal. The Commission will hold a telephone conference at 1 p.m. EDT on Monday, July 27, to receive additional comments from members of the public. Interested parties are invited to call 1-800-438-0222 and enter Participant ID number 677495; a participant ID is required to join the call. The Commission's proposed rule would amend section 141.33 of its regulations to include a new criterion that would require a DCO to assess a civil monetary penalty against an eligible person that has caused or contributed to the improper transfer of funds by the DCO of \$25,000 or more. The proposed rule would also require a DCO to assess a civil monetary penalty against an entity if it has caused or contributed to the improper transfer of funds by the DCO of \$50,000 or more. The proposed rule is designed to implement Congress's intent to promote market discipline in the OTC derivatives market, and is a requirement of FMIA 2010. These proposed rules were published in the Federal Register on April 18, 2011 (76 FR 19651), and a 75-day comment period began on that date.

A: The return statement of main() is never reached, so there's no reason to exit() from main(). Also it is generally good practice to have all conditions for a switch-case statement evaluated, so this is indeed a bug in your code. Q: There are no files in the output directory but still running the unit test In Android Studio 3.0, I just executed a unit test. If I run the test by command line as below, it works fine, but if I run it by Android Studio, it seems the unit test didn't run at all. ./gradlew test Execution with Android Studio: Test configuration used: testInstrumentationRunner "com.mycompany.myapplication" Here is the code: @RunWith(AndroidJUnit4.class) @LargeTest public class MyActivityTest extends ActivityInstrumentationTestCase2 { @Override protected void setUp() throws Exception { super.setUp(); } @Override protected void tearDown() throws Exception { super.tearDown(); } public void testExample() { onView(withId(R.id.button)).perform(scrollTo(), click()); } } I couldn't see any error in the log files. How can I debug this? A: The test results appeared in Android Studio but it is not enabled. To enable the test results by Android Studio, we have to change the test configuration from Run with > Android JUnit4 > Test > Basic. After that, we just execute the unit test from Android Studio as before. Now the results appear in the test result window. A: It's OK to run unit tests with "run with android JUnit4". You must first configure your run-configurations with options inside: For Android JUnit4, Configure the settings by: Click Run/Debug -> Edit Configurations. Add "Run/Debug Configurations" from left. Then add (at the end) Android JUnit4 as a configuration.
