The first commercial version of AutoCAD was AutoCAD 1981, released in April 1981. The first version of AutoCAD for microcomputers was released in December 1982. Originally developed for the Apple II, the first Windows version of AutoCAD

was released in 1985. AutoCAD was the first CAD software application to support the QuickCAM, an Apple II accessory. In early 1989, AutoCAD 1984 was introduced as a drawing and modeling application. In 1990, Autodesk released the first native version of AutoCAD for microcomputers. With the release of AutoCAD in 1993, the company began to release AutoCAD LT, a new version of AutoCAD specifically targeted for small to medium-sized businesses. AutoCAD LT replaced all previous versions of AutoCAD for the Apple Macintosh and DOS, and also required a license to run on a PC. AutoCAD LT was one of Autodesk's first products, and in many ways set the stage for the modern versions of AutoCAD. Its most significant new features were AutoLISP, which allowed users to customize their own user interface. A graphical interface was included, and AutoCAD LT started including a drawing area, a toolbar, and a docking station. These were features which would eventually be found in the industry standard AutoCAD. As the company developed new versions of AutoCAD, the software changed significantly. The process of revision was very gradual, with many more changes in between each version. This process began with AutoCAD 2003, in which major changes included major additions to the point cloud, annotations, and text editing. AutoCAD 2004 brought a new split view, the ability to open and export DWF files, editing shapes, the ability to import and export image files, and a new set of building tools. AutoCAD 2009 marked a major revision in the interface. While the look was more similar to AutoCAD LT than to previous versions of AutoCAD, the new user interface was more than just a redesign. The user interface improved throughout the 2009 release series, with the latest version of AutoCAD being AutoCAD 2010, and the latest version of AutoCAD LT being AutoCAD LT 2010. Basic Features AutoCAD is designed for use by designers, engineers, and architects. Most users use a mouse, keyboard, and graphics tablet for

A rapid and simple method for the simultaneous determination of triclosan (TCS) and triclocarban (TCC) in human urine was developed using ultra-high-performance liquid chromatography-tandem mass spectrometry (UHPLC-MS/MS). The chromatographic separation was performed on an Agilent Zorbax SB-CN column (2.1 mm × 100 mm, 1.8 μm) using a mobile phase composed of 0.1% formic acid in water and methanol at a flow rate of 0.2 mL/min. Detection was performed on a triple-quadrupole tandem mass spectrometer in multiple reaction monitoring (MRM) mode. The calibration curves of TCS and TCC were linear ( $r > 0.9953$ ) in the concentration ranges of 0.05-10 μg/L and 0.05-10 μg/L, respectively. The limits of quantification (LOQ) were 0.05 μg/L for TCS and 0.05 μg/L for TCC. Q: Finding the maxima, minima, and mean of a function over a finite interval I am attempting to find the maxima, minima, and mean of a function over a finite interval. The function is

$f(x) = \left(\sqrt{x^2-1}-x\right)^2 + \left(\sqrt{x^2-1}+x\right)^2$  over the interval  $[0,2]$ . I know this is a bit vague, so I'll explain it. First, I have to find the minima and maxima. I found the minima to be at  $x = \pm 1$ , and the maxima to be at  $x = 1/\sqrt{2}$ . Next, I want to find the mean. What I did was this:

$\frac{\int_0^2 f(x) dx}{\int_0^2 (2x) dx}$   $x=0$  is not on the interval  $[0,2]$ . I also took  $x=2$  as my lower limit since  $x=0$  is not on the interval. However, I am having trouble with the upper limit of integration. After some research, I found this formula to be used for functions that involve squares and

cubes.  $\int_0^u$

$f(x) dx = \int_0^u \left(\sqrt{x^2-1}-x\right)^2 + \left(\sqrt{x^2-1}+x\right)^2 dx$   
If  $u$  is equal to  $2$ , I get that  $\int_0^2 f(x) dx$  is equal to  $\int_0^2 \left(\sqrt{x^2-1}-x\right)^2 + \left(\sqrt{x^2-1}+x\right)^2 dx = \frac{1}{2} - \frac{1}{\sqrt{2}}$  However, what I actually want is

$\int_0^2 \left(\sqrt{x^2-1}-x\right)^2 + \left(\sqrt{x^2-1}+x\right)^2 dx = 2-1$

What am I doing
