## **AutoCAD Crack + Patch With Serial Key Free For PC**

Users of AutoCAD typically use tools to draw objects in the 3D space, add dimensions to drawings, create outlines, align objects, snap objects to one another, and annotate drawings. Users can also use an extensive set of fillets and rounds to create general or special 3D shapes. A tool is an object that can be manipulated by the user to perform certain functions, such as creating and editing shapes. AutoCAD supports four tool families: Line, Arc, Text, and Polyline. Each tool family has a variety of tools designed for specific uses, such as creating lines, arcs, or text. This article documents some of the most commonly used, useful tools available in AutoCAD. Line tool Line tool The Line tool is used to create and edit lines, like this line in the drawing below: The Line tool provides a variety of options for creating lines, such as the ability to select the thickness of the line, the line color, and the stroke color. Line tool options Clicking the Line button on the Line tool causes the drawing area to display the Line tool options. The Line tool has several different line types that can be used, depending on the object being drawn and the desired look. The different line types are described in the following table: Line Type Description Unbeveled Constant width Straight or curved lines. Beveled The same as above, but the line will look flat on two sides. Beveled Corner To make a corner, draw the line, then rotate the line 90 degrees to the right, as shown below: The Line tool also has options for making and editing the first and last points of a line. To edit the first and last points of a line, click the Points tab and select the Lines option. Selecting the points in this manner is known as clicking the points. The Points tab will display the Point and Line tool options. Click the Start Point of Line tool and click the point in the drawing where you want the first point of the line to be located. Click the End Point of Line tool and click the point in the drawing where you want the last point of the line to be located. The Points tab also has options for creating and editing the first and last points of a line. Drawing Point and Line tool options Click the Arrowheads tab and select the desired number of arrowheads for the line, as shown in
